

INDIVIDUALLY TAILORED BREAST AUGMENTATION

The end result of a breast-augmentation procedure should be beautiful breasts which totally suit the figure of the individual.

Dr Kourosh Tavakoli is renowned in Australia for his breast surgery. Most Australian women seeking breast augmentation want to have natural-looking breasts.

Modern-day breast augmentation can achieve a very natural appearance if tailored to the individual. Understanding and appreciating natural breast formation and shape, along with precise surgical techniques, are essential to achieve beautiful results. Patient cup size requests range from a full B cup to D cup, with the most common size requested being a C cup.

Dr Tavakoli is a breast-augmentation super-specialist with many years' experience. He will assess and tailor each augmentation according to the individual, which is why he has an excellent success rate and many happy clients.

Choosing to undergo breast-augmentation surgery can be a big decision to make. It is important to research, understand and be comfortable with your decision before making your commitment to undergo surgery.

FIVE ESSENTIAL FACTORS

Dr Tavakoli identifies five essential factors for consideration when assessing breast-enhancement surgery.

1. A woman's body build and height;
2. Current breast size, shape and symmetry;
3. Breast droopiness;
4. Chest wall shape and dimensions;
5. The patient's desired final breast shape and cup size.

THE NOSE SERVES AS THE AXIS OF THE FACE

When you improve the shape of the nose you improve and rebalance the whole of the face.

One of the most commonly performed facial cosmetic surgery procedures is rhinoplasty. Rhinoplasty can improve the tip of the nose and its projection, remove the hump and change the length as well as the overall shape of the nose. Combined with septoplasty, or sinus surgery, the operation can also improve one's breathing.

Sculpting a new nose requires an in-depth knowledge of nasal anatomy and function, as well as an appreciation of the patient's sense of beauty and ethnicity. A natural rhinoplasty procedure should complement a patient's other facial features, creating a natural balance and harmony. A well-recognised example of successful rhinoplasty is that of Cameron Diaz, the Hollywood actress. Her new nose is so perfect for her face that it accentuates her true beauty and at the same time looks like the nose she should have been born with. Dr Tavakoli uses the latest imaging system to give you a realistic image of the proposed changes.

Most rhinoplasty procedures can be performed as day surgery, requiring as little as 10 days off work. Successful rhinoplasty is a combination of careful patient selection and planning, accurate operative technique and thorough post-operative care.
